Ayman Abusura

Technical Skills

- Frontend: HTML5, CSS3, JavaScript, TypeScript, React, React Native, Next.js, Tailwind CSS, Vite
- Backend: Node.js, Express.js, PHP, Python
- AI & Automation: Claude API, DeepL API, Playwright, Puppeteer
- Databases & Infrastructure: PostgreSQL, Prisma, Supabase, SQLite, Redis, BullMQ
- APIs & Security: REST APIs, SSE, JWT
- DevOps: Docker, Nginx, Git

About Me

I am a Fullstack Developer with over 5 years of commercial experience building modern web applications, internal services, automation systems, and Telegram bots and mini apps. I specialize in developing frontend and backend applications using React, Node.js, Express, and modern web technologies.

I have experience developing and maintaining internal services, Telegram bots and Telegram Mini Apps, automating business processes, building AI tools based on LLMs, and integrating APIs. I am experienced in full-cycle development, from UI and system architecture design to testing, optimization, and maintaining production-ready solutions.

I am looking to further develop my skills in Fullstack development and AI/LLM engineering, system architecture design, process automation, and building AI-powered solutions, creating efficient and scalable digital products

Experience

LeadHunters **Jan 2022 – Present**

Fullstack developer | AI & Automation

A media buying agency specializing in traffic acquisition across various social media platforms.

➤ Main Responsibilities:

- Developing services and mini-applications integrated with Telegram bots and Telegram mini apps
- Building and adapting landing pages/pre-landing pages for different devices
- Developing and integrating APIs
- Maintaining and improving website forms
- Identifying and fixing bugs, optimizing client-side code
- Localizing interfaces for different languages

➤ Key Achievements:

- Designed and developed an AI-powered landing Pages generator using Claude AI (Anthropic): a full-stack application built with React, Node.js/Express, PostgreSQL, Redis, and BullMQ.
- Implemented automated HTML page generation, template library management, and project export as archives.
- Built and deployed Telegram Mini Apps and internal tools.
- Developed a Node.js Telegram bot to automate routine processes and improve operational efficiency.
- Implemented an automated landing page translation service using the DeepL API with preserved HTML structure and layout integrity.
- Built automation tools using Playwright (User-Agent emulation and scenario testing).
- Developed a Puppeteer-based Node.js bot for automated form filling and submission.
- Created a user data generation service with filtering by country and quantity.
- Integrated external APIs and optimized web application performance.
- Developed and adapted landing pages for multiple devices with cross-browser compatibility.
- Improved web forms by adding interactive features and anti-duplicate submission mechanisms.

Language

Russian
English
Arabic

Education

➤ Princess Sumaya University for Technology — 2015 - 2019

- B.SC. Degree in Computer Science

Certifications

- Meta Front-End Developer — Aug 2023
- Meta React Native — Feb 2024
- Agile with Atlassian Jira — Feb 2024
- IBM Full Stack Software Developer — Sep 2024
- The Complete AI Coding Course (2025) Cursor, Claude Code — Dec 2025
- n8n Foundations — Aug 2026
- IBM RAG and Agentic AI — Oct 2026
- AI Agents with Model Context Protocol & TypeScript — Oct 2026
- AI Agents in Typescript/Javascript — Oct 2026
- Google AI — Oct 2026

- Adapted interfaces for Arabic-speaking markets, including full RTL implementation.
- Provided guidance to the team on responsive design, RTL layout, and JavaScript optimization.

➤ Key Performance Indicator (KPI):
- Reviewed and implemented over 42,000 landing and pre-landing pages within 5 years.

➤ TECH STACK:
Frontend: HTML5, CSS3, JavaScript, TypeScript, React
Backend: Node.js, Express.js, PHP
AI & Automation: Claude API, DeepL API, Playwright, Puppeteer
Database & Infrastructure: PostgreSQL, Prisma, Supabase, SQLite, Redis, BullMQ
API & Security: REST API, SSE, JWT
DevOps: Docker, Nginx, Git

Nozzum for Business Solutions **Mar 2020 - Jun 2021**

Java Developer

Specializing in software solutions for businesses, particularly in the financial sector. Developed "Remit Flow", a platform for currency exchange and money transfers.

➤ Main Responsibilities:
- Participated in all stages of software development: design, implementation, deployment, and support.
- Developed and maintained Java/Java EE applications with a focus on performance and scalability.
- Collaborated with cross-functional teams (analytics, DevOps, support) to ensure smooth operations.
- Prepared technical documentation and user guidance.

➤ Key Achievements:
- Built sender data input module (validation, document processing).
- Integrated with MySQL for customer data storage and optimized queries.
- Calculated commissions, taxes, and final amounts dynamically.
- Integrated external APIs for transfers and currency transactions.
- Implemented business logic for currency conversion and final amount calculations.

➤ TECH STACK:
Java, Spring (Boot, Security), Hibernate, MySQL, RESTful APIs
